

## General Requirements

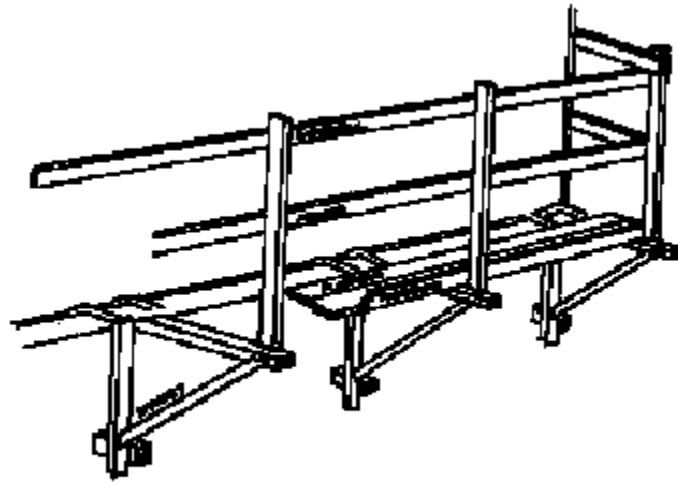

All form and carpenter's bracket scaffolds shall be constructed in accordance with the general, platform and guardrail requirements for fabricated frame scaffolds – **“Requirements for Fabricated Frame Scaffolds”**.

### *Specific Requirements*

- All brackets, except those for wooden bracket scaffolds, shall be attached to the supporting formwork or structure by means of one or more of the following:
  - Welding;
  - Hooking over a secured structural supporting member;
  - Nails;
  - A metal stud attachment device, with the form wales either bolted to the form or secured by snap ties or tie bolts extending through the form and securely anchored; or
  - For carpenters bracket scaffolds only, by a bolt extending through to the opposite side of the structure's wall;
- Wooden bracket-form scaffolds shall be an integral part of the form panel; and
- Folding type metal brackets, when extended for use, shall be either bolted or secured with a locking-type pin.
