5G and the 4th Industrial Revolution

The Polsky Center is pleased to welcome Dennis Ong, MBA '00, head of 5G mobility and distinguished architect at Verizon Smart Communities for a lively discussion on 5G and its role in the 4th Industrial Revolution on Friday, November 22.

This discussion will provide insight into why 5G is the fundamental platform for the 4th Industrial Revolution and will become an integral part of societies and civil infrastructures, just like roads, energy, and internet. Examples include the use of AR/VR for remote surgeries. The safe deployment of autonomous vehicles which will need to communicate with its surroundings. The widespread implementation of mobile robots in factories and homes. 5G will fundamentally alter the way we live, work, and relate to one another and will usher in a new industrial revolution.
