

Jeanne Century is the Director of Outlier Research & Evaluation at UChicago STEM Education and a Research Associate Professor at the University of Chicago. UChicago STEM Education is a Center devoted to bridging research and practice to further quality education. Outlier is a group within UChicago STEM Education that works to empower those who seek to advance and improve education with the knowledge, tools and support to realize change. Century has spent the majority of her thirty-year career working in, and with urban schools and large urban school districts across the United States. She has developed comprehensive science instructional materials, and been part of professional development, technical assistance and strategic planning efforts for teachers, school and district administrators, and state leaders across the country. Century has conducted evaluations of a wide variety of programs, for learners of all ages in both, school and out-of-school settings. These settings have ranged from programs run by zoos and museums to summer camp and computer science programs run by Google, to leadership academies. Her research efforts have focused on the impact of inquiry science instruction, improving utilization of research and evaluation, measurement of fidelity, implementation and sustainability of innovations through implementation science, STEM schools, computer science education and digital media tools and technologies. Century serves on several advisory boards for National Science Foundation-funded projects. She also served on the transition team for the Obama-Biden administration where she focused on STEM education and in 2010 shared the National Association for Research in Science Teaching award for the most significant publication of the year.
