

**Dr. Po-Chin LIANG, MD**
***Chief, Division of Abdomen Radiology***
***Assistant Professor***
***Department of Medical Imaging***
***National Taiwan University Hospital***

Dr. Po-Chin LIANG graduated from Chung Shan Medical college of Medicine in 1991, and then completed Radiology Residency Training at the National Taiwan University Hospital from 1993~1997. Now he is currently attending physician and chief, division of abdomen radiology at National Taiwan University Hospital.

Dr. Liang has been devoted to the field of interventional radiology techniques for at least 23 years, especially for the treatment of liver cancer. Within a decade, the image technique and the medical devices in the interventional radiological system have been evolved. Therefore, there are more minimally invasive intervention radiological surgery can be processed.

Dr. Liang not only makes efforts in engaging TACE, HAIC and Yttrium 90 SIRT but also in performing liver and kidney RFA, cryotherapy and microwave therapy. Moreover, the Nanoknife technique, cooperating with surgeon creates more advantages for the patients.

Dr Liang also involves in performing minimally invasive surgery, such as biliary tract drainage, PTA and Stent, photodynamic therapy to relief the complications of biliary after the treatments of biliary tract tumors, liver transplantation, or liver and biliary disease.
