Educational Assignments and Visiting Researchers

Please note that in-person Educational Assignments have resumed with the following exceptions:

- Minors (<18) are not allowed at this time; only 18 yrs and up.
- There are new guidelines for students registered at UChicago. Click here to view the new guidelines.
- Visiting Researchers doing professional work are allowed, please complete the forms to initiate the process.
- All visitors must comply with the COVID-19 visitor guidelines.
- Educational Assignments conducted remotely/virtually may continue.

Please submit the request forms available on our website. Contact the ORS Administrator with any questions.

Visitors on Campus

The UChicago GoForward website provides guidance related to visitors on campus.
Please visit https://goforward.uchicago.edu/visitor-information/ for more information.

Vendors must complete the Vendor Access Form prior to arriving.

For more information about current COVID-19 public health guidelines, please visit the UChicago Forward website.

Upholding Public Health Requirements

Use the UCAIR online form to anonymously report concerns about compliance with COVID-19 health requirements.

Research Safety Training
To satisfy social distancing efforts, all training for the following are accessible online either via live Zoom training or a webinar. Click here to sign up.

- Radiation Safety
- Chemical Hygiene Plan (Lab Safety)
- Comprehensive Biosafety
- IATA Shipping Dangerous Goods

Please note, you do not need to have an EHSA account to take training, but when trying to access EHSA without an account, you will be rejected. Please contact the EHSA administrator to request access.

HAZWOPER Certification
(Hazardous Waste Operations and Emergency Response)

ORS offers a HAZWOPER Certification course specifically for work at UChicago. There are 2 courses available:

- 8-hour refresher for those who already have a certification (must show proof).
- 40-hour course for new trainees.

If anyone is interested in this course, please contact the ORS Administrator.

Training Module in Environmental Health & Safety Assistant (EHSA)

- To access online training modules: https://ehsa.uchicago.edu/training
- To register for live training sessions: https://ehsa.uchicago.edu/trainingregistration

Contact the EHSA Administrator for technical assistance.
Research Safety Updates

Position Search

The Office of Research Safety is searching for an Associate Health Physicist in our Radiation Safety unit, apply here: https://uchicago.wd5.myworkdayjobs.com/en-US/External/job/Hyde-Park-Campus/Associate-Health-Physicist_JR13507

Contact the ORS Administrator with questions.

Prescription Safety Eye Glasses

The Office of Research Safety needs your input. Please complete a short survey and let us know if you are interested in prescription safety eye glasses.

Click here for survey: https://www.surveymonkey.com/r/scriptgoggles

Training Lab

We are excitedly expanding our program! Members from the ORS team have been very busy preparing our very own laboratory space to use in the near future. The following activities are just a few examples of what we plan to do:

- Relevant location to conduct in-person or Zoom training;
- Mock laboratory for training purposes;
- One-on-one or small group demonstrations:
  - proper set up and use of a biological safety cabinet (BSC);
  - proper set up and use of a fume hood;
  - donning and doffing of personal protective equipment (PPE);
  - chemical segregation and storage;
  - transferring solvents
  - hazardous material spill clean-up;
  - hazardous waste handling;
o chemical storage;
o laser eyewear storage, laser alignment, Class 3b and Class 3 laser safety
o decontamination of radioactive material;
o radiation survey meters
o and more!

- Applied biosafety research for the purpose of streamlining biological safety practices;
- Prepare training videos for lab-related activities described above.

Chemical Safety Blog

RAMP Up Continued:

R = Recognize Hazards
A = Assess the Risks of Hazards
M = Minimize the Risks of Hazards
P = Prepare for Emergencies

In our last edition of Newsletter, we introduced “RAMP up for Safety.” In this edition we will discuss:

**A = Assess the Risks of Hazards.**

Accessing risk is one of the most difficult steps of the RAMP up method. Because researchers will have to consider both subjective and objective components of the hazards. Please seek information from reliable sources such as safety professionals, experienced researchers, and PIs. Website for example PubChem and CAMEO Chemilas are also useful/alternative sources to find additional data about chemical and physical hazard of the chemical and procedure.

Remember! Risk should be assessed/evaluated during the experimental planning phase prior to work. Use the following Risk Matrix Table to assess the risk of the hazards. Risk is greatest where severity of consequence great and there is a high probability that an unwanted incident can occur.
### Risk Assessment Matrix Table

<table>
<thead>
<tr>
<th>Likelihood</th>
<th>Negligible</th>
<th>Minor</th>
<th>Moderate</th>
<th>Significant</th>
<th>Severe</th>
</tr>
</thead>
<tbody>
<tr>
<td>Very Likely</td>
<td>Low Med</td>
<td>Medium</td>
<td>Med Hi</td>
<td>High</td>
<td>High</td>

For more info go to ACS chemical and laboratory safety page ([https://www.acs.org/content/acs/en/chemical-safety/basics.html](https://www.acs.org/content/acs/en/chemical-safety/basics.html)).

Next Chemical Safety TIP will be on **M - Minimize Risks of Hazards**, stay tuned!

---

## Biological Safety Blog

### Hand Washing Luxury in the Malamy Lab

Research Technician and Lab Safety Contact for the Malamy Lab Safety Contact, Elizabeth Baldo, was encouraging handwashing well before COVID-19. She noticed that her hands were drying out from frequent handwashing, so her mom started giving her soaps that have nourishing vitamin E with softening shea extract & aloe that will not only keep hands clean, but also protect them from drying out. She now has an extensive
variety of soaps and switches them out to match the season or room theme. Washing hands in the Malamy lab (and the 5th floor restroom in GCIS) has become a fun treat! Kudos to Betsy and her mom for encouraging handwashing by making it fun and luxurious!!

What can you do in your lab to encourage safe practices?

According to OSHA:
Hand hygiene is the first line of defense and hand washing is generally considered the single most important procedure for preventing the spread of nosocomial infection. Hand washing is to be used in conjunction with Standard Precautions.

Hands should be cleaned:
· Upon completion of required tasks and before leaving the laboratory
· Immediately after removal of gloves or other personal protective equipment
· Upon contact or when there is visible contamination with blood or other potentially infectious material
· Before and after patient contact
· Before eating, drinking, smoking, applying cosmetics, or handling contact lenses
· Before and after using the bathroom
· Before any activities in which hand contact is made with mucous membranes, the eyes, or breaks in the skin (eg, cuts, abrasions, wounds).

Proper hand-washing techniques:
1. Wet hands with water.
2. Apply enough soap to cover all surfaces.
3. Thoroughly wash all parts of hands and fingers up to the wrists, rubbing hands together for at least 20 seconds.
4. Rinse hands with water and dry thoroughly with paper towels.
5. Use paper towels to turn off faucet before discarding the towels in the waste receptacle.
The radiation emitted from a laser can be dangerous, but it isn't the only hazard associated with these devices! Lasers are used all around us and are present in many everyday items such as printers, Blu-ray players, barcode scanners, and light show displays. We have all been told not to direct a laser beam towards a person or a highly reflective surface because many lasers can cause irreversible eye damage in a fraction of a second. Did you know that the laser radiation is not the only hazard associated with laser systems?

Fire hazards, laser-generated-airborne-contaminants (LGACs), electrocution, and compressed gasses some of the other hazards associated with many laser systems used here at the University of Chicago. These auxiliary hazards have the very clever name of, “Non-beam hazards.” A fire is possible when high powered lasers irradiate a combustible material, and the risk is even greater in oxygen-rich environments. When a laser beam is incident upon a material, depending on the energy deposited, different reactions can occur, and different target materials may result in the release of dangerous gases such as benzene from laser interactions with PVC. The internal components of a laser may present an electric shock hazard and exposures can occur anytime protective housing panels are removed such as during maintenance activities. There have even been documented fatalities due to electrocution from laser system components.

While lasers are useful for highlighting items in a presentation, or completing laboratory experiments, they also come with different levels of risk based on the class of the laser. At the University of Chicago, it is important all Class 3b and class 4 lasers are registered so that the laser safety team can perform a hazard analysis on the laser system and the laboratory set-up. These hazard analyses include looking for these non-beam hazards! It is important to stay aware, and if you notice something that doesn’t seem quite right, don’t be afraid to say something. If you have any questions or concerns about lasers and laser safety at the University, do not hesitate to reach out to us at lasersafety@uchicago.edu.
Joint Research Safety Initiative (JRSI)

UChicago's student-led safety team

JRSI is currently recruiting interested students to join their team! Check them out here: [https://jrsi.uchicago.edu/](https://jrsi.uchicago.edu/).

Interested in joining JRSI? Please contact the ORS Administrator.

---

Which Safety Unit Do I Call?

Have a question or need help but are unsure who to contact? Visit the new "Who Does What?" page available on the Environmental Health and Safety's website (direct link also available on the ORS website) where you will find a comprehensive list of activities, definitions and who to contact.

There is a search function that will help make navigation easier. If you have any questions, please contact us at [researchsafety@uchicago.edu](mailto:researchsafety@uchicago.edu).

For emergencies, always contact campus police at 123 (campus phone), or 773-702-8181.

---

Lab Orientation Checklist

Labs onboarding new employees should use the "Research Lab Orientation Checklist" to ensure that they have a good idea of what the standards are for lab safety requirements. It lays out the general requirements, and gives an idea of what safety equipment should be pointed out to new hires.

Labs or programs with groups of new students should contact us to schedule an orientation.

Please reach out to us at [researchsafety@uchicago.edu](mailto:researchsafety@uchicago.edu)
Potential Sharps Container Shortages Guidance

Some federal agencies are warning of a potential bio-sharps shortage during the vaccination drive period: Strategies for Sharps Disposal Container Use During Supply Shortages | CDC

The CDC provided this guidance document: Strategies for Sharps Disposal Container Use during Supply Shortages For Managers and Purchase Agents (cdc.gov)

Hazardous Waste Pickup

Campus laboratory hazardous waste pickups regularly occur on Thursday's. Medical Center research laboratory hazardous waste pickups occur on Wednesday's.

For campus locations, enter waste pick-ups through EH&S Assistant. If you need access to the EH&S Assistant, contact Environmental Health and Safety at safety@uchicago.edu.

For laboratories located in the Medical Center, contact the Environmental Health and Safety Medicine Office at 773.795.SAFE or safety.office@uchospitals.edu.

Thank you for your continued cooperation with ensuring safety at the University of Chicago. Please feel free to contact Environmental Health and Safety at safety@uchicago.edu or 773.702.9999 with any questions.

- Click here to learn more about Hazardous Waste handling.
- Click here to view the Hazardous Waste Disposal Flow Chart

Knock Knock... Who is in your Lab?

The Office of Research Safety needs your help to keep track of personnel working in your laboratory.

The EHS Assistant (EHSA) system is used to track who is working in a lab. To view the current roster in your lab, click on the Worker Registration icon. This section allows you to add new researchers and remove people who are no longer there. We only need to know about people who perform wet lab bench work or work with lasers - clinical staff, computational researchers, and office managers do not need to be added.

Click here to view the guide for adding and removing workers with step-by-step instructions.
Laboratories working with recombinant DNA, pathogens, or biological toxins are required to have an Institutional Biosafety Committee (IBC) protocol. All laboratory members working with such biohazards need to be added to the IBC protocol. These protocols are tracked in AURA IBC, not EHSA. In AURA, adding or removing people needs to be done by a Personnel Funding Amendment. While the Personnel Funding Amendment is processed very rapidly, please note:

- The PI must submit the amendment in AURA - although other workers in the lab can edit the protocol, only the PI can click the submit button.
- After the amendment is approved, everyone added must log in to AURA, review the protocol, and acknowledge that they have been added.

If you have any questions about adding or removing people, please reach out to us at researchsafety@uchicago.edu

---

University of Chicago Accident and Incident Reporting (UCAIR)

[Image of UCAIR icon]

UCAIR provides a user-friendly mechanism for reporting work-related accidents and incidents to EHS and ORS. For more information about UCAIR, visit the FAQs page. We also encourage the reporting of unsafe conditions observed on campus.

Please remember to first call 123 (on-campus phone) or 773.702.8181 (off-campus phone) for accidents requiring emergency response to ensure the appropriate emergency response personnel are notified.

Involved individuals, supervisors, affected persons, or witnesses can submit reports. Anonymous reporting is available for events that do not require medical treatment.

---

Medical Payments for UChicago Student Injuries (MedPay)

**What is covered?**
Out-of-pocket costs incurred for emergency medical care for accidents or injuries sustained during assigned responsibilities while in laboratories or other research activity, regardless of fault.

**Who is covered?**
UChicago students injured during assigned responsibilities in laboratories or other research activity. Includes enrolled UChicago graduate and undergraduate degree students.
The program is set up for covering emergency care at UCMC and would not apply to non-degree visiting students or injuries that occur in field research. In these instances, students should utilize their health insurance. Additionally, students who are injured abroad can call International SOS for assistance.

Submitting a timely report of the injury via UCAIR will route resulting medical bills for payment by the Office of Risk Management. It is important that UChicago students identify themselves as UChicago students when submitting via UCAIR.

If a student receives bills for related treatment, they should contact the Office of Risk Management at risk@uchicago.edu.

Any additional questions or concerns should be directed to the Office of Risk Management.
